

INSTALLATION ADVICE

Non-combustible wall weep for discharging water from external walls

-  Meets British standards; BS5250, BS8000, BS5628, BS8215
-  Satisfies all NHBC requirements
-  Complies with all relevant Building Regulations

- 1.** Invisiweep NC should be used in perpendicular joints to perform the function of a drainage channel wherever water could collect inside a cavity wall such as over external lintels, or over cavity trays.
- 2.** To work effectively the Invisiweep NC should be placed directly on top of the base of a cavity tray, DPC or on the front edge of a lintel.
- 3.** Wall weeps should be placed at 450mm centres above openings with a minimum of two to comply with NHBC recommendations. Care should be taken to ensure the Invisiweep NC is kept clear of mortar and does not become blocked. This is important at the cavity side of the weep which could be blocked by mortar droppings from above.
